Overview
At the Center for Autism and Related Disorders (CARD), occupational therapists work with children and their families to help children develop the skills—including fine motor, visual motor and visual perceptual skills—and sensory processing abilities they need to complete activities of daily living such as playing, dressing, grooming, bathing, eating and feeding. Through direct intervention, consultation and parent and caregiver training, occupational therapists focus on teaching children to successfully engage with and participate in daily life.

Our Team
Occupational therapists at the center have extensive experience in the following areas:

- Autism spectrum disorder
- Sensory processing disorder
- Child-centered play
- Fine and gross motor development
- Visual perception and visual motor skills
- Feeding
- Early intervention
- Transition-age youth
- Administration of standardized assessments
- Evidence-based practice
- Community outreach

Evaluations
Occupational therapists are part of an interdisciplinary team that provides evaluations and individual intervention plans for children seen at CARD. The team includes:

- Developmental pediatricians
- Neuropsychologists
- Pediatric psychiatrists
- Social workers
- Speech-language pathologists
- Behavioral specialists
- Genetic counselors

Each evaluation consists of a chart review, a caregiver interview, clinical observations and standardized assessments to determine the child’s current level of performance as it relates to fine motor, gross motor, visual motor, visual perceptual and sensory processing abilities and daily living skills (including dressing, grooming, bathing, eating and playing).

Treatment
Following an occupational therapy evaluation, an occupational therapist will make the appropriate treatment recommendations. Occupational therapy promotes positive engagement between children and their families and peers during personal or community activities that are meaningful to them.

Individual Services
If indicated, individual treatments may be offered to provide the caregivers and children with strategies that promote independence during activities of daily living. These treatments may involve developing a sensory diet, creating child-centered play strategies, or developing strategies that facilitate fine motor or independent feeding or dressing skills.
Group Services

- **Play With Me**: This is a short-term parent-child training program designed for children under age 3 who demonstrate limited purposeful play skills due to delays in motor performance or inhibiting sensory behaviors. The goal of Play With Me is to provide families with ideas for developing skills, as well as sensory-based strategies that can be implemented within the child’s natural environment.

- **PALS**: This is a social skills group that focuses on children ages 6 to 8. The group, co-led with a speech-language pathologist, is aimed at improving children’s social skills, including cooperation, turn-taking, following directions and conversation skills during activities of daily living. More specifically, PALS focuses on leisure and play skills by addressing underlying deficits in the areas of sensory motor skills and language.

- **OT in Achievements**: This is a group that focuses on sensory regulation, learning readiness and generalizing functional skills in the Achievements classroom setting. Services are provided in a group setting before or during Achievements classes to children ages 3 to 6.

- **Social Skills Through Exercise and Play (SSTEP)**: This is a social skills group for children ages 8 to 10 with mild to moderate language delays and autism spectrum disorder. Children in the group engage in movement-based activities in order to improve gross motor development, problem-solving, frustration tolerance, cooperation, regulation and overall social skills. Sessions are cofacilitated by an occupational therapist and a clinical social worker over a 12-week period.

- **Life Skills**: This is a short-term program designed for individuals from preadolescence to young adulthood, between the ages of 10 and 20. The program focuses on developing skills important for independence in daily living, establishing social and peer relationships and preparing individuals for transition to a postsecondary education setting or the workplace. The program is cofacilitated by an occupational therapist and speech-language pathologist who individualize the curriculum to meet the specific needs of each participant.

Consultative Services

If indicated, occupational therapists will contact a child’s outside providers (such as teachers, therapists, coaches and tutors) to offer consultation and education to providers working with the child.

Training

Occupational therapists at CARD provide in-service and parent trainings throughout the year focusing on issues related to a child’s development, including daily living skills, sensory processing and development of play.
