

TEAM Infant Siblings Study

The **Early Assessment of Language Markers in Infant Siblings Study**

Do you have a baby under 6 months old?

- Researchers at Kennedy Krieger Institute are studying how infants learn language early in life.
- By learning more about your child's development, we hope to improve ways to identify children who may benefit most from early intervention.

This research study includes:

- Developmental Assessments
- Hearing screening
- Non-invasive EEG
- Questionnaires about you and your child

...when your baby is 6 and 12 months

If eligible, participating families will receive:

- \$45 after completed assessments
- Developmental feedback
- Referral for a formal clinical evaluation if concerns are identified during research assessments
