

A Research Study of Persons with Down Syndrome

If you or your child have Down syndrome

We are currently recruiting participants to better understand behavior, executive function, sleep and adaptive skills in children and adolescents.

We are especially interested in recruiting individuals who do or do not have significant behavior concerns as we are trying to determine the quality of these features across a broad sample of children and adolescents

Who: If you/your child are between 3-15 years, **with** Down syndrome.

What: All subjects will

- Complete a consent form that must be signed by a parent or guardian and returned
- Complete questionnaires designed to collect information on behavior, executive function, sleep and adaptive skills
- Provide recent psycho-educational evaluations or speech and language reports and a copy of your child's chromosome report, *if available*.

Where: Questionnaires may be completed in the comfort of your home. Completed questionnaires and available records are returned via email, US mail or fax.

Risks and Benefits: There are no known risks to participation. Your participation will provide no direct benefit; however, parents and caretakers may benefit by having better support and insight into their child's condition.

If you are interested in participating, please contact us!
