Fairmount Rehabilitation Programs at Kennedy Krieger Institute

Who We Are
The Fairmount Rehabilitation Programs at Kennedy Krieger Institute offer an array of interdisciplinary therapy programs for patients with injuries and disorders of the brain, spinal cord, and musculoskeletal system. Regardless of their needs, our goal is to help put our patients on the path to improving their functional skills and enhancing their health and fitness.

Who We Serve
Depending on which of the Fairmount Rehabilitation Programs is right for your child, we can provide services for children from age one year to young adulthood. We see patients with a range of diagnoses, including:

- Cerebral palsy
- Acquired brain injury
- Spinal cord injury or dysfunction
- Musculoskeletal disorders
- Brain tumor
- Chronic pain
- Stroke

Our Team
The professionals who make up our interdisciplinary team are experts in a variety of disciplines, such as:

- Pediatric rehabilitation medicine
- Physical therapy
- Occupational therapy
- Speech language pathology
- Neuropsychology
- Special education
- Social work
- Nursing
- Behavior psychology

Additional consultative services are available, as needed, in these areas:

- Orthopedics
- Neurology
- Adaptive equipment
- Assistive technology
- Psychiatry
- Nutrition

Our Treatment Approach
All of our programs provide interdisciplinary treatment from a team that works together to meet our patients’ needs. When a patient begins any of the Fairmount Rehabilitation Programs, our team works closely with the family to develop an individualized treatment plan, with an overarching goal of increasing independence at home, in school, and in community life.

We are all born with great potential. Shouldn’t we all have the chance to achieve it?
Our Programs

Specialized Transition Program
Our day hospital model was developed to treat children and adolescents with intensive therapeutic needs. We provide a full range of cognitive and physical rehabilitation services for neurological and orthopedic conditions.

Constraint-Induced and Bimanual Therapy Program
Through this program, we provide intensive therapy for children and adolescents with hemiparesis. We use an evidence-based understanding of the brain’s natural ability to form new connections to increase function and independence.

Focused Interdisciplinary Therapy Program
This program offers intensive therapy to children and adolescents with persistent, disabling conditions. Treatments target specific therapeutic goals to help patients improve their physical abilities, daily activities, communication skills, and cognitive skills.

Healthy Lifestyles Therapy Program
This program is designed to help children and adolescents with physical impairments explore exercise options. Our experienced therapy team helps patients build a fitness program, and identify ways and venues to continue their regimen in their home or community.

Community Rehabilitation Program
This program provides rehabilitation in the patient’s home and other important community settings. Our services range from intensive daily therapy for patients with acute needs, to helping individuals with less severe issues return to community activities.
