Rett and Related Disorders Clinic

at Kennedy Krieger Institute

Who We Are

Rett syndrome (RTT) is a neurological disorder that affects girls almost exclusively. It is characterized by normal early development during the first six to 18 months of life, and is followed by a short period of developmental stagnation or regression affecting language, gait and hand use. This period is followed by the emergence of distinctive hand movements, irregular breathing, and other multisystem manifestation. Other common features include epilepsy, intellectual challenges and slowed head growth.

Although Rett syndrome is caused by mutations in the MECP2 gene, several genetic disorders (FOXG1, CDKL5 and duplication of MECP2) have a similar clinical presentation and patients with these genetic disorders are also seen in this clinic.

Kennedy Krieger Institute, through its Center for Synaptic Disorders, is one of the few healthcare providers in the mid-Atlantic that diagnoses and treats these syndromes. We provide comprehensive medical evaluations and clinical care. In addition to our expertise in these rare disorders, our interdisciplinary resources mean that our patients' needs can be met at one location. It is our goal to help our patients and their families gain a better understanding of the condition and access appropriate medical care and therapeutic interventions to improve their overall health and quality of life.

Who We Serve

The Rett and Related Disorders Clinic at Kennedy Krieger provides expert medical care and treatment for children, adolescents and adults with Rett syndrome, FOXG1, CDKL5-Deficiency Disorder and MECP2 Duplication syndrome.

Our Team

Kennedy Krieger is home to a unique interdisciplinary collaboration of experts. Our clinicians, research scientists and rehabilitation professionals work together to provide optimal interdisciplinary care for patients. Because Rett syndrome and the related disorders can affect many different systems in the body, treating a patient with the disorder often requires the collaboration of a wide range of medical specialists. Our team develops an individualized care plan, modifying it as the patient's needs change over time.

Key specialists who see our patients include those in the following fields:

- Assistive communication
- Bone specialists
- Clinical social worker

- Gastroenterology Genetic counseling
- Neurology
- Nutrition
- Occupational therapy
- Orthopedics
- Palliative care
- Physical therapy

Treatment

Each patient's treatment plan includes individualized interventions designed to help the patient cope with the loss of abilities, improve or preserve function, manage seizures and communicate via advanced technologies like eye gaze communication devices. These interventions address the full spectrum of clinical concerns. Additionally, we can also facilitate access to Kennedy Krieger's comprehensive team of specialists to assist with specific educational, behavioral and other therapy needs.

Kennedy Krieger Institute recognizes and respects the rights of employees, trainees, and patients and students, and their families. At Kennedy Krieger, we ground our care, services, training and research in treating others with respect and civility. We respect the cultural identity of every person. Kennedy Krieger does not discriminate against people based on, but not limited to, perceived or actual race, color, culture, ethnicity, national origin, age, language spoken, accent, marital status, veteran or military status, immigration status, socioeconomic status (i.e., access to resources), physical or mental disability, religion, pregnancy status, sex, sexual orientation,

or gender identity or expression. We strive for equitable care for all individuals for whom we provide services, training, education and research participation. We encourage employees, trainees, and patients and students, and their families, to become active partners in the services provided by asking questions, seeking resources and advocating for their needs. Our culture of care is extended to our patients, the patients' family members and other persons served. Here, "family" refers to parents, other family members, guardians, surrogate decision-makers and healthcare agents. © 2022 Kennedy Krieger Institute 4/2022
