Development of Attention & Cognitive Control in Children: The Role of Iron

ATTENTION: Parents of Children 6-8 years old!

We are recruiting children with and without a history of early iron deficiency to participate in a Kennedy Krieger Institute research study examining the role that brain- and blood-based iron play in the development of critical cognitive functions.

Who: Children ages 6-8 years old with and without early iron deficiency

What: Eligibility Screening via parent phone interview
One day on-site visit lasting several hours
Paper and pencil tests, parent and teacher questionnaires, an MRI scan, and blood draw

Where: Kennedy Krieger Institute in Baltimore, Maryland

Benefit: There are no medical benefits or significant risks, but you will receive a brief report of testing results and a picture of your child's brain!

Compensation: $75.00

Contact: Lisa Ferenc at (443) 923-4469
