

PARTICIPATE IN A RESEARCH STUDY: **Genetic Influences on Behavior and Reading**

Who: Children ages 6-11 years and their parents to participate in a behavior and genetics research study.

What: Researchers will be collecting a salivary sample from participants, as well as data from behavioral questionnaires completed by participants' parents. None of these tests are harmful or painful. There are no direct medical benefits for participating in this study. Participants may have a chance to win a \$50.00 gift card for helping with the study.

Where: Department of Neuropsychology at the Kennedy Krieger Institute

When: Participation will involve one study visit and will take place during a regular visit with your psychologist in the Department of Neuropsychology. Participation can also be completed over the phone and by mail; it should only take about 30 minutes to complete the study. We will try our best to accommodate your schedule!

Why: To investigate the genetic differences in children and how these differences may affect behavior and learning

How: JOIN TODAY! If you are interested in participating, please contact us!
