Fellowship in Pediatric Rehabilitation Medicine

A two-year, ACGME-accredited program based at Kennedy Krieger Institute and affiliated with the Johns Hopkins University School of Medicine

This fellowship educates clinicians and prepares them for successful careers in pediatric rehabilitation. Fellows learn in a supportive environment under the mentorship of a faculty of outstanding clinicians committed to helping define and achieve fellows' career goals.

Fellowship Highlights

- Rotations within Kennedy Krieger's pediatric rehabilitation continuum of care provide clinical learning experiences, including pediatric consults at the Johns Hopkins Children's Center and PICU, inpatient care at Kennedy Krieger's inpatient rehabilitation hospital, outpatient clinical programs at Kennedy Krieger and Johns Hopkins, and community care within Kennedy Krieger's rehabilitation day hospital program.
- Fellows follow patients in weekly pediatric rehabilitation clinics. They also see patients in a wide variety of subspecialty clinics, according to a monthly schedule.
- Working as part of an interdisciplinary team, fellows learn about the contributions of other disciplines, such as neuropsychology and behavioral psychology, and learn to manage a rehabilitation team in this dynamic environment.

PLUS

- Three weeks of vacation
- FREE parking
- Competitive salary and benefits package
- Health insurance at no cost to the fellow and their spouse
- Reimbursement for conference expenses (such as travel, hotel, registration and meals)
- Wellness and cell phone stipends

"I chose to train at Kennedy Krieger because I knew I'd see the full spectrum of pediatric rehabilitation here. From general rehabilitation management to the diagnosis and management of rare diseases with top-notch interdisciplinary clinics, they have it all; I didn't want to train anywhere else. I had the opportunity to tailor my training to meet my career goals. There was so much freedom to make my fellowship everything I needed it to be. Now that I am an attending physician in a more rural area with fewer resources, I am constantly recalling what I've learned from the fellowship. I had the privilege of training under multiple pediatric physiatrists, as well as with neuromuscular neurologists, developmental pediatricians, pediatric orthopedists and many other specialists. Because of these opportunities, I now have meaningful communication between all of the other specialists who serve my patients, and can operate as the team leader in a cohesive, comprehensive rehabilitation medicine model of care in an underserved area."

– Emily Hillaker, DO, physical medicine and rehabilitation physician
